Vision

### Basic Kit (3hp-25hp)

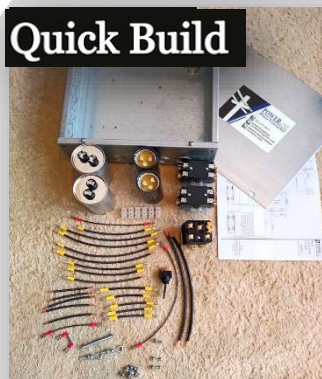

A Basic Kit includes all the parts you need to get started on a 3-phase system. It contains visual based instructions, all required gauges of wire, and all parts needed to build a basic convertor. This kit supplies the information and specialized parts to create a phase converter in a more hands-on fashion. You will need to cut the wires to length as well as supply your own panel and motor.

Offered in sizes ranging from 3 to 25 horsepower.

Build Time: 2 – 4 Hrs.

### Quick Build (3hp-25hp)

A Quick Build contains all the components included in a Basic Kit, however, with a standardized design for easy application. The wires are all pre-cut to specified lengths and this kit is shipped with a panel designed for this application. All the holes are pre-drilled, and bolts are supplied. All you need to do is assemble the panel using our visual based instructions. You will need to supply your own motor.

Offered in sizes ranging from 3 to 25 horsepower.

Build Time: 30 Mins. – 1 Hr.

### Basic Panel (3hp-25hp)

A Panel is pre-assembled and ready to go out of the box. The only work required is connecting lead wires from a motor and wiring in the single phase in and three phase power out.

This product also comes with two switch options: You receive either a toggle switch, which is a traditional on/off switch, or a Push-Button, which automatically turns off the panel if power is cut for an additional safety feature. You will need to supply your own motor.

Offered in sizes ranging from 3 to 25 horsepower.

Build Time: Ready out of the Box

### Used Motor

A Full System is a complete 3 phase convertor unit. All you need to do is wire in single phase power in and three phase power out.

We offer systems incorporating used motors for a more economic option (pictured above), or a new motor/panel system for worry-free 3 phase power (pictured below).

### Full System (3hp-40hp)

### New Motor

The product is sold as a system and contains a motor, panel, and visual instructions for installation.

Offered in sizes ranging from 3 to 40 horsepower.

Build Time: Ready out of the Box
